

Know
early to
protect
you and
your baby.

LEARN ABOUT YOUR BABY

in

With UNITY™ you can learn about your baby's risk for chromosome aneuploidy and 5 commonly inherited conditions:

- ✓ cystic fibrosis
- ✓ spinal muscular atrophy
- ✓ sickle cell disease
- ✓ thalassemias
- ✓ trisomy 21 (Down syndrome), 18, 13, sex chromosome aneuploidies

Doctors recommend **ALL** pregnant women are screened for these conditions

Additional information on these conditions can be found on unityscreen.com/patients

ONE SIMPLE TEST

with

The UNITY™ test only needs blood from your arm, so it's **SAFE for you and your baby.**

Only UNITY™ informs you about your baby's risk for inherited conditions **without a sample from baby's father**

RESULTS IN 2 WEEKS

Find out if your baby is at risk and learn about your risk for future pregnancies.

vs

If desired, learn your **baby's sex and Rh blood type***

** applicable to Rh negative mothers only*
